We now stock Diesel Exhaust Fluid - DEF - !

DEF is a non hazardous urea solution used to chemically reduce Nitrogen Oxide (NOx) emissions from heavy duty diesel powered vehicles.

New truck engine manufactures will comply with the new emission standards impose by the EPA Clean Air Act that came into effect on January 1st 2010. Under the new regulations, most engine manufacturers have chosen the Selective Catalyst Reduction (SCR) system as the most efficient way to meet these clean air standards. Diesel Exhaust Fluid (DEF), the operating fluid for SCR is a non-toxic solution that transforms harmful Nitrogen Oxide (NOx) emissions from diesel-powered vehicles into harmless water vapor and nitrogen. According to engine manufacturers, SCR combined with DEF improves overall fuel economy by approximately 5% compared to competing technologies, and achieves NOx reductions in excess of 90%. Yara is the producer of Air1® brand DEF solutions which reduces NOx in the exhaust gas system of your SCR equipped diesel vehicle, be it a truck, a bus, a tractor, a car, a van or an off road vehicle.

Making the choice of Air1® means a guaranteed supply of DEF, as Yara is the world's largest DEF producer. This ensures you continuity of supply in quality DEF. Air1® complies with the highest industry standards in DEF certified by American Petroleum Institute (API). You can be sure your SCR vehicle will function flawlessly by using Air1® DEF.

Diesel Exhaust Fluid (DEF) is a high quality urea solution that is easy to use

Diesel Exhaust Fluid (DEF) is 32.5% solution of high-purity urea in de-mineralized water that is used with the Selective Catalytic Reduction system (SCR) to reduce emissions of nitrogen oxides (NOx) from the exhaust systems of diesel vehicles. DEF is clear non-hazardous liquid. It is not a fuel, nor a fuel additive and needs to be used in a DEF dedicated tank in your diesel vehicle. It is replenished in a similar way to refueling diesel. Should you spill DEF on your hands, simply wash it off with water.

How much Diesel Exhaust Fluid (DEF) do I need?

Average consumption of DEF is generally 2% per gallon of diesel fuel, so you will need to tank much less for DEF then you do for diesel fuel. 2.5 gallons of Air1 DEF will yield over 350 miles of travel.

We stock the 2.5 gallon container, boxed, with pour spout.

Part Number: DEF25 _____

And the 55 gallon drum, in a plastic, recycle-able container.

Part Number: DEFD _____
