**Warning:** When tightening and loosening winches, always maintain a firm grip on the winch bar. Never release a winch bar without checking the pawl to ensure that it is fully engaged between ratchet teeth. Releasing the winch bar without the pawl being properly engaged can cause serious injury to the user or bystanders. The use of a winch bar specifically designed to loosen or tighten winches is recommended. "Cheater bars" or extenders should not be used with the winch bars. The tip of the winch bar should be inserted through both holes in the end cap of the winch to prevent the winch bar from slipping out, and overloading the bar tip or winch end cap.

#### Cargo Securement Rules

January 1, 2004. The rule change revolves around tie-downs for equipment. Currently, one-half of the working load must be secured, which is generally done with two chains of appropriate grade. The new rules require a minimum of four tie-downs regardless if two cover the weight of the working load. The tie-downs should be placed at the front and the rear of the load and at appropriate points in-between. Additionally, all necessary equipment must be completely lowered and secured. Articulation vehicles must also be restrained in a manner that prevents articulation while in transit. 

The change creates more work for the driver, but should eliminate roadside haggling over whether or not a load is properly secured.

#### Chain Binders

For heavy duty interstate transport users. Meets all DOT requirements.

The values for working loads shown here should be used for calculating the number of chain tiedown assemblies required to secure cargo in compliance with DOT regulations.

TIRE LINK CHAINS - TIRE CABLE CHAINS

Several Western States (California, Oregon, Washington) have chain laws that require carrying and/or using winter traction products at certain times or under certain road conditions.

In these states, failure to carry or use winter traction products as prescribed by local authorities can and may result in fines and/or other penalties. These "chain laws" are the most complicated for commercial vehicles, specifically tractor trailer combinations.

Questions about chain laws and current regulations can be directed to the following:

• California DOT (Sacramento) (916) 654-3102
• Oregon DOT (Ashland, OR)(541) 482-4344
• Oregon DOT (Salem, OR)(503) 986-3005
• Washington DOT (Olympia)(360) 705-7000
• Colorado DOT (Denver) (303) 757-9536

Laclede offers a complete line of standard Highway Service Truck Chains that are built to current NACM specifications. These chains are manufactured with regular side chain with most sizes also available with cam style side chain. This line is available in Singles, Wide Base and Dual Triples.

**Truck Cable Chains** are the most economical and lightweight traction devices in the broad line of Laclede products. Single Truck Cable Chains are widely used as drag chains for many major fleets. The zinc plated finish and case hardened rollers on the cross members provide added product life. All Laclede Truck Cable products are manufactured with a built-in lever style fastener. Truck Cable Chains are available in Singles, Wide Base and Dual Triples.

**HEAVY TRUCK/BUS APPLICATIONS** (Weight = 23lbs/pair)
